

Font Comparison

The word "Siechem" set in 10 typefaces. All fonts below are embedded in this PDF.

Siechem

Aptos

SANS-SERIF

Microsoft 365 default. NOT a system font - see final page.

Siechem

Aptos Display

SANS-SERIF

Aptos variant intended for headings.

Siechem

Arial

SANS-SERIF

Current site font. On every Windows/Mac/iOS device.

Siechem

Calibri

SANS-SERIF

Old Microsoft Office default (replaced by Aptos).

Siechem

Segoe UI

SANS-SERIF

Windows system UI font. Closest common match to Aptos.

Siechem

Verdana

SANS-SERIF

Wide, highly legible at small sizes.

Siechem

Tahoma

SANS-SERIF

Narrower than Verdana, compact.

Font Comparison (continued)

Serif and monospace options.

Siechem

Trebuchet MS

SANS-SERIF

Slightly rounded, friendlier tone.

Siechem

Georgia

SERIF

Serif designed for screens. Traditional feel.

Siechem

Times New Roman

SERIF

Classic print serif. Formal, dated on web.

Siechem

Consolas

MONOSPACE

Fixed-width. Technical / spec-sheet feel.

Side by Side

Identical size (18pt) so letterform differences are the only variable.

Siechem Wires & Cables

Aptos

Siechem Wires & Cables

Aptos Display

Siechem Wires & Cables

Arial

Siechem Wires & Cables

Calibri

Siechem Wires & Cables

Segoe UI

Siechem Wires & Cables

Verdana

Siechem Wires & Cables

Tahoma

Siechem Wires & Cables

Trebuchet MS

Siechem Wires & Cables

Georgia

Siechem Wires & Cables

Times New Roman

Siechem Wires & Cables

Consolas

A Note on Aptos

Important: how it renders here vs. how it would render on the website.

Aptos appears in this PDF, but that does NOT mean it will appear on the website.

These are two different things, and the distinction matters for the decision:

In this PDF The actual Aptos font file is embedded inside the document, so the letterforms above are genuinely Aptos and will look identical on any computer, whether or not Aptos is installed on it. Fonts declare their own embedding permission via a flag called `fsType`; Aptos is set to `0x0008`, 'editable embedding permitted' - the same value Arial carries. Embedding it in a document is expressly allowed.

On the website A website cannot embed a font the way a PDF does. It must send a copy of the font file to every visitor's browser. Microsoft's licence for Aptos states: 'This agreement does not grant you a license to distribute nor sublicense all or part of the software to any third party', and separately prohibits 'publish[ing] the software for others to copy'. Serving it from the website is exactly that.

Worth noting: Aptos was not installed on the machine that produced this PDF - a Windows 11 system with Microsoft Office. It had to be downloaded separately from Microsoft. That is a useful signal: if a Windows 11 + Office machine does not have Aptos, most site visitors (especially on Mac, Android and older Windows) will not have it either.

What this means for the website

Current setup Aptos is listed first in the site's font stack, with Arial as fallback. Visitors who already have Aptos see Aptos; everyone else sees Arial. No font file is ever redistributed, so there is no licensing exposure. Costs nothing.

To guarantee Aptos for every visitor, a webfont licence would need to be purchased from Microsoft or a font marketplace. That is a commercial decision, not a technical limitation.

Alternative Pick a font that is free to embed on the web (many high-quality open-licensed faces exist) and it will then look identical for 100% of visitors at no cost.
